Rob/Heidi- I need to conduct a site visit to 18 Fernwood Rd in Raymond in regards to the ongoing shoreline stabilization project. You received a PBR #72924 dated August 10, 2021. In the email below, you agreed to maintain a maximum of 100 linear feet of shorefront which is a required standard under PBR Section 8. Additionally, the riprap needs to remain no higher than 2 feet above normal high water line. As the pictures show, this work appears to disregard both these required standards, and therefore would not qualify for PBR. The work would have required a full Natural Resources Protection Act (NRPA) individual permit. I am contacting the Town and asking them to assist me for this site visit. I strongly suggest stopping the remaining work (but getting the appropriate ESC controls in place ASAP to avoid any further water quality violations) and allowing the appropriate agencies to meet onsite to discuss the next steps. Minimally this work will need to be cut down to what PBR standards require and areas that have been disturbed will need to be restored.

Additionally, I noticed a second home has been constructed in the last few years. I believe that should have gotten a Stormwater PBR because this property is well over the one acre threshold of impervious area and no longer meets the single-family residence exemption. I will be speaking with my supervisor to discuss if an ATF stormwater permit will be required. The large amount of riprap that has been placed at the shorefront greatly increases that impervious area number as well.

I will reach back out after connecting with all agencies and folks,

Hi Alexis -

Thank you for your quick response. I didn't realize you were the only field service staff - ugh!

Can you please mark the file accordingly that we have agreed to amend the project to 100 ft max and we will resubmit another PBR for the remaining portion of the project.

Thanks Alexis - here's to maintaining your sanity for the remainder of the summer!!

Heidi- The database indicates that the PBR was received on July 23, 2021. It was marked deficient on August 6, 2021. I am currently the only field service staff out of the Portland office and did not manage to send an email explaining the deficiency until yesterday the 9th. So, I apologize for that. If you can change the proposed work to reflect 100 linear feet or less of riprap then I can change the PBR decision. And like I mentioned, you can resubmit for the remaining shorefront when this PBR has been finished.

Thank you for your understanding and patience!!

I will keep a look out for an email with how to proceed,

Alexis Sivovlos

Good Afternoon Alexis -

Thank you for your email.

First of all, apologies for our ignorance, we should have been more educated on the 100 ft max. However, I'm a bit confused on the timing of the receipt of your email.

I have the time line as follows:

Permit submitted electronically to the PBR email on 7/22/21 at 10:54am

I had the permit diaried to be approved and ok to start the project on 8/4/21 (14 days from submission)

I didn't receive an email from you until 8/9/21 (19 days after submission) stating the permit was marked deficient retroactively on 8/6/21 (6 days prior).

Can you please clarify so that moving forward we will all be on the same page.

Thanks Alexis!

I have marked this deficient (as of August 6, 2021) because the standards only allow 100 linear feet of riprap under PBR Section 8. In order to qualify, you will need to change the plans to reflect no more than 100 linear feet of shorefront being stabilized. Once that portion is complete, another PBR can be submitted for the remaining shorefront. If you want to complete the activity as one project, it will require a full individual NRPA permit. Please email Dawn Hallowell for a pre-application meeting and/or to assign a project manager.

Let me know how you wish to proceed!

Thank you,
